

Environmental Health Management Systems (EHMS) is designed to support the delivery of environmental health services. Its development has been supported by the Chartered Institute of Environmental Health (CIEH).

About the System

EHMS is a fully maintained online system providing the procedures and standard documents required to deliver environmental health services. It also provides a knowledge base of legislation, national policy and guidance, regional datasets, relevant publications and standards – all the resources an environmental health service needs. It is maintained by an editorial team and a panel of specialist contributors.

System Benefits

- Significant management time-saving.
- Improved confidence of practitioners delivering services.
- Improved consistency and quality of delivery.
- Unique facility to embed local information within each procedure.
- Facilitates efficient collaborative working with other Local Authorities and regulators.
- Secure 24/7 business continuity in the event of civil incidents and emergencies.
- Enables mobile and flexible working practices, reducing carbon footprints.

System Content

Available now: Environmental Protection, Food Safety, Health & Safety, Management, Private Sector Housing, Public Health

Available April 2010: Licensing, Out of Hours

Available September 2010: Environmental Crime, Pest Control, Trading Standards.

Subscriptions

Subscription to the Standard Option provides procedures and standard documents. The Local Authority can add its local policies and guidance and within each procedure local information can be added, so that it becomes a unique resource for each user.

EHMS is delivered by RH Environmental Limited. The purchase of a licence provides access to the system by logging in with an email address and password. No software purchases are necessary – all that's required is access to a web browser.
